Table of Contents

Acknowledgements iii

1 Introduction 1

2 The Earliest Metalworking in South-Eastern and Central Europe: A Review of the Evidence 3

2.1 Copper and the 'Copper Age' 4
2.2 Pigments and Beads to Axes: The Evolution of Symbols? 8
2.2.1 The Earliest Copper Artefacts in South-Eastern Europe 9
2.2.2 The Earliest Copper Artefacts in Central and Northern Europe 13
2.3 The Earliest Evidence of Mining 16
2.4 The Transformation of Matter: Smelting 17

3 Traditions in the Making: Aspects of the Production of Eneolithic/Copper Age Shaft-Hole Axes 21

3.1 Hammer Axes and Axe-Adzes: Chronology, Distribution and Data of this Study 21
3.2 Casting and Working I: The Metallographic Evidence of the Hammer Axes 27
3.3 Casting and Working II: The Metallographic Evidence of the Axe-Adzes 33
3.4 Eneolithic/Copper Age Casting Technique: Cores and Open Moulds? 40
3.5 Casting Process and Oxide Inclusions: Their Influence on Working and Performance 44

4 Traditions under Transformation I: The Casting and Working of Eneolithic/Copper Age Flat Axes 50

4.1 Eneolithic/Copper Age Flat Axes: Chronology, Distribution and Data of this Study 50
4.1.1 Horizon 1: Flat Axes of the Early to Middle Eneolithic/Copper Age 50
4.1.2 Horizon 2: Altheim and Vinča Type Axes of the Later Eneolithic/Copper Age 54
4.2 Traditions: The Metallographic Evidence of Horizon 1 Flat Axes 55
4.3 Transformations: The Metallographic Evidence of Horizon 2 Flat Axes 62
4.4 The Casting of Flat Axes: General Characteristics 70
4.5 Casting, Oxides and Compositional 'Determinism' 71
4.6 Casting, Working and the Perception of the Axes 76

5 The Axes in Context I: Copper and 'Copper Age' Society 80

5.1 The Function and Meaning of the Axes 80
5.2 Approaches to Eneolithic/Copper Age Society 84
5.2.1 Elites, Essentialism and the Evolution of Political Rule 89
5.2.2 Social Dynamics and the Explanation of Culture Change 93
5.2.3 Kinship, Tribes and Cooperation 94
5.3 The Social Context of Early Metallurgy: Regional Trajectories 97
5.3.1 Social Evolution at Varna? 97
5.3.2 'Tribal Cycling' During the Late Neolithic and Copper Age of the Carpathian Basin 101
5.4 Kinship and the Spread of Metallurgical Knowledge 106

6 Early Bronze Age Metallurgy: A Review of the Evidence 118

6.1 Definitions and Chronology: The Early Bronze Age 118
6.2 Bronze Age Mining in Central Europe 121
6.3 Bronze and the Bronze Age 129
6.4 Copper and Bronze: Technological Choice in EBA Metallurgy 133

7 Traditions under Transformation II: Technological Choice in Bronze Age Metallurgy 135

7.1 Bronze Age Axes: Chronology, Distribution and Data of this Study 135
7.2 The Casting and Working of Bronze Age Axes: Outline of the Metallographic Evidence 139
7.3 From Copper to Bronze I: Salez Axes of the North Alpine Region 151
7.3.1 Working Fahlore Copper I: Sennwald-Salez and Hindelwangen 152
7.3.2 Working Fahlore Copper II: Salez Axes with Lower Impurity Contents 153
7.3.3 Salez: Distortions in Technological 'Progress' and the Spread of Tin Bronze? 155
7.4 From Copper to Bronze II: Local Traditions and Long-term Change 157
7.4.1 Copper and Bronze in Saxon Type Axes of Eastern Central Europe 157
7.4.2 Flanged Axes of the Langquaid Type and Bronze Age Horizon 2 Palstaves 162
7.5 Deconstructing Compositional Determinism: The 'Evolution' of Material Properties? 168
7.5.1 The Influence of Composition on Casting Properties 168
7.5.2 The Influence of Composition on Workability and Hardness 170
7.5.3 Conclusions: Composition and the 'Evolution' of Material Properties 171

8 The Axes in Context II: A Case Study from the North Alpine Region of Central Europe 173

8.1 'Axe Ingots' and Current Models of Alpine Copper Mining and Distribution 176
8.2 Alternative Approaches to Mining and Metal Production 179
8.3 Axe Ingots and Directional Trade? Modernist Conceptions in Distribution Studies of Singen Copper 181
8.4 Grave Groups and Kinship: Reconsidering the Singen Evidence 182
8.5 Kinship, Settlement and Seasonality in Alpine Copper Production 186

9 Some Concluding Thoughts 191

References 192
